Occupational Respiratory Protection in China: Some Changes in Awareness, Training and Product Application

Hong Yao

3M China, Technical Department

From the point of view of a respiratory protection trainer and respirator field application service engineer, the development and current situation of occupational respiratory protection in China is introduced, focusing on the building of self-protection awareness, the demand for professional training, the change of public attention and product in use. Some major issues are also discussed that are in relation to respiratory protection education, research and information resources, enforcement of occupational health regulation, respirator market supervision, etc.
