Abstract

In Japan, safety equipment training is performed by the safety and health education trainers and instructors. These trainers and instructors were established by the Ministry of Health, Labor and Welfare, and they were trained at safety and health centers in Tokyo and Osaka, operated by Japan Industrial Safety and Health Association. 47 seminars are held at both centers, but curriculum that includes safety equipment are only 8 seminars.

In this way, Japan safety equipment education is still incomplete.

Therefore, Japan Safety Appliances Association which is composed by manufacturers and distributors of safety equipment, trains instructors from the member companies who visits customers all over Japan. Over 1300 instructors was born at present.

These safety equipment advisers and instructors, which will be the lecturers, gives a course at customer companies and at times to distant places.

As mentioned above, company educations for safety equipment are still incomplete, as the training of the experts are restricted to only Japan Safety Appliances Association, Public Interest Incorporated Association.

Only 3 companies requested for the training to the Japan Safety Appliances Association.

But it does not mean that the companies does not educate their employees.

The supervisor who are called foreman or manufacturing supervisors, teaches their own experiences and little education to their subordinates.

But there are still problems of the use of safety equipment on site.

It appears from the lecturer's result who guides the safety and health diagnosis.

The presentation about it will be the following.
